

HELIPORT use case POLARIS: Integration of a High Intensity Laser in a complete data life cycle workflow

Better Data for Better Science - Research Data Management Workshop, 28-29 October 2021

Oliver Knodel, Joachim Hein, Alexander Kessler // contact: o.knodel@hzdr.de

HELIPORT HELmholtz Scientific Project WORKflow PlaTform

“ The HELIPORT project aims at developing a platform which accommodates the **complete life cycle** of a scientific project and links all corresponding programs, systems and workflows to create a more **FAIR** and comprehensible project description.

The POLARIS Experiment @ HI Jena

- The **P**etawatt **O**ptical **L**aser **A**mplifier for **R**adiation **I**ntensive **E**xperiments (**POLARIS**) is the only fully diode-pumped, double-CPA laser system worldwide.
- Used for Laser Particle Acceleration Experiments
- Research project of the Faculty of Physics and Astronomy at the University of Jena and the Helmholtz Institute Jena (HI-Jena).
- Key features:
 - Energy on target: $E_L = 16.7 \text{ J}$, $t_L < 100 \text{ fs}$
 - Repetition rate: 1/50 Hz
 - Optimized peak intensity
 - Full suppression of short pre-pulses

Malte C. Kaluza, Contrast Dependence of Laser-Driven Proton Acceleration, 18th Advanced Accelerators Concepts Workshop, Breckenridge, US, (2018)

The POLARIS Experiment Chain

Malte C. Kaluza, Contrast Dependence of Laser-Driven Proton Acceleration, 18th Advanced Accelerators Concepts Workshop, Breckenridge, US, (2018)

View from oscillator to A4

Important Diagnostics:

- CCD cameras
- Photodiodes
- oscilloscopes
- Spectrometer
- energy meter

```

In the HELIPORT project, our goal is to bring all together: images, settings, target metadata and everything else.

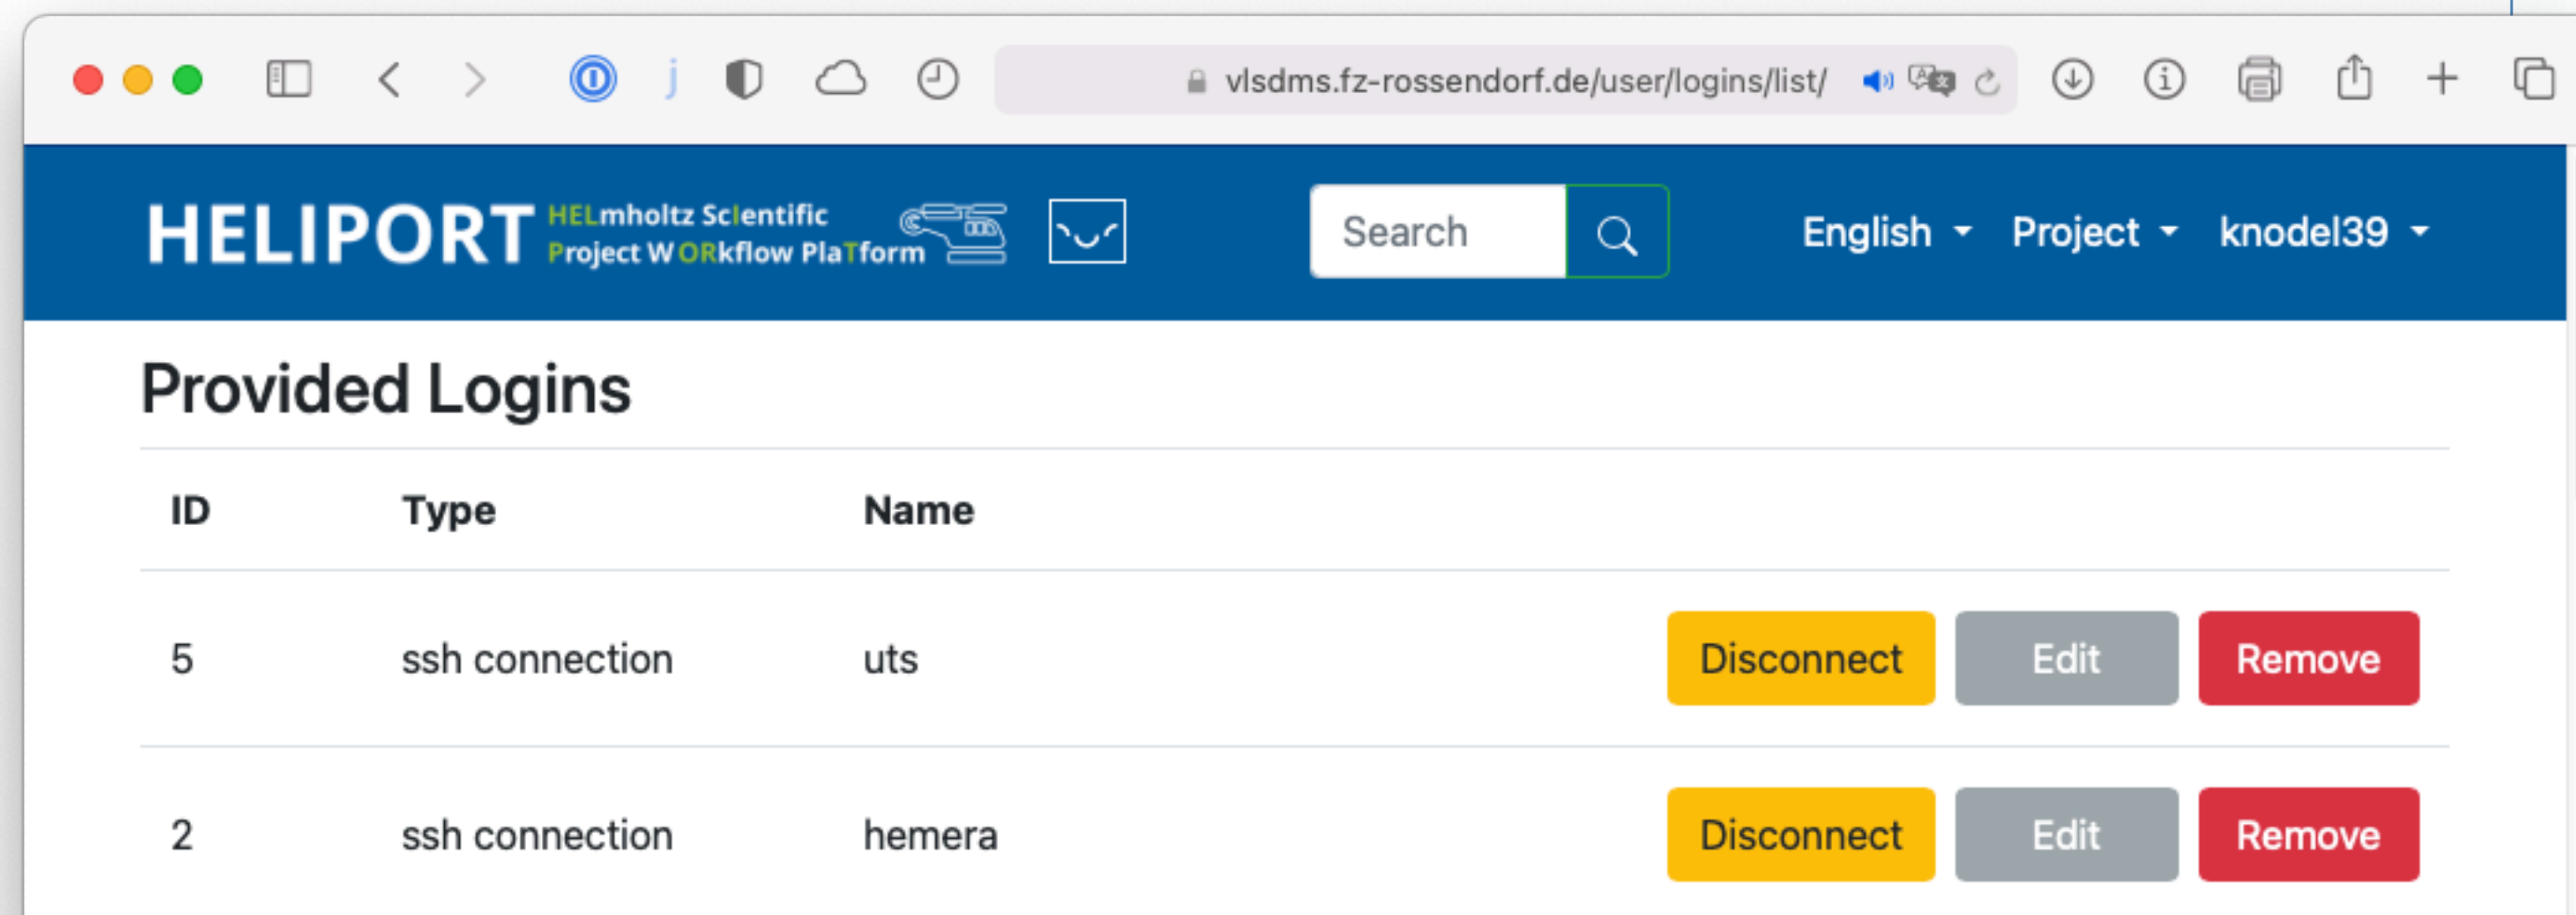

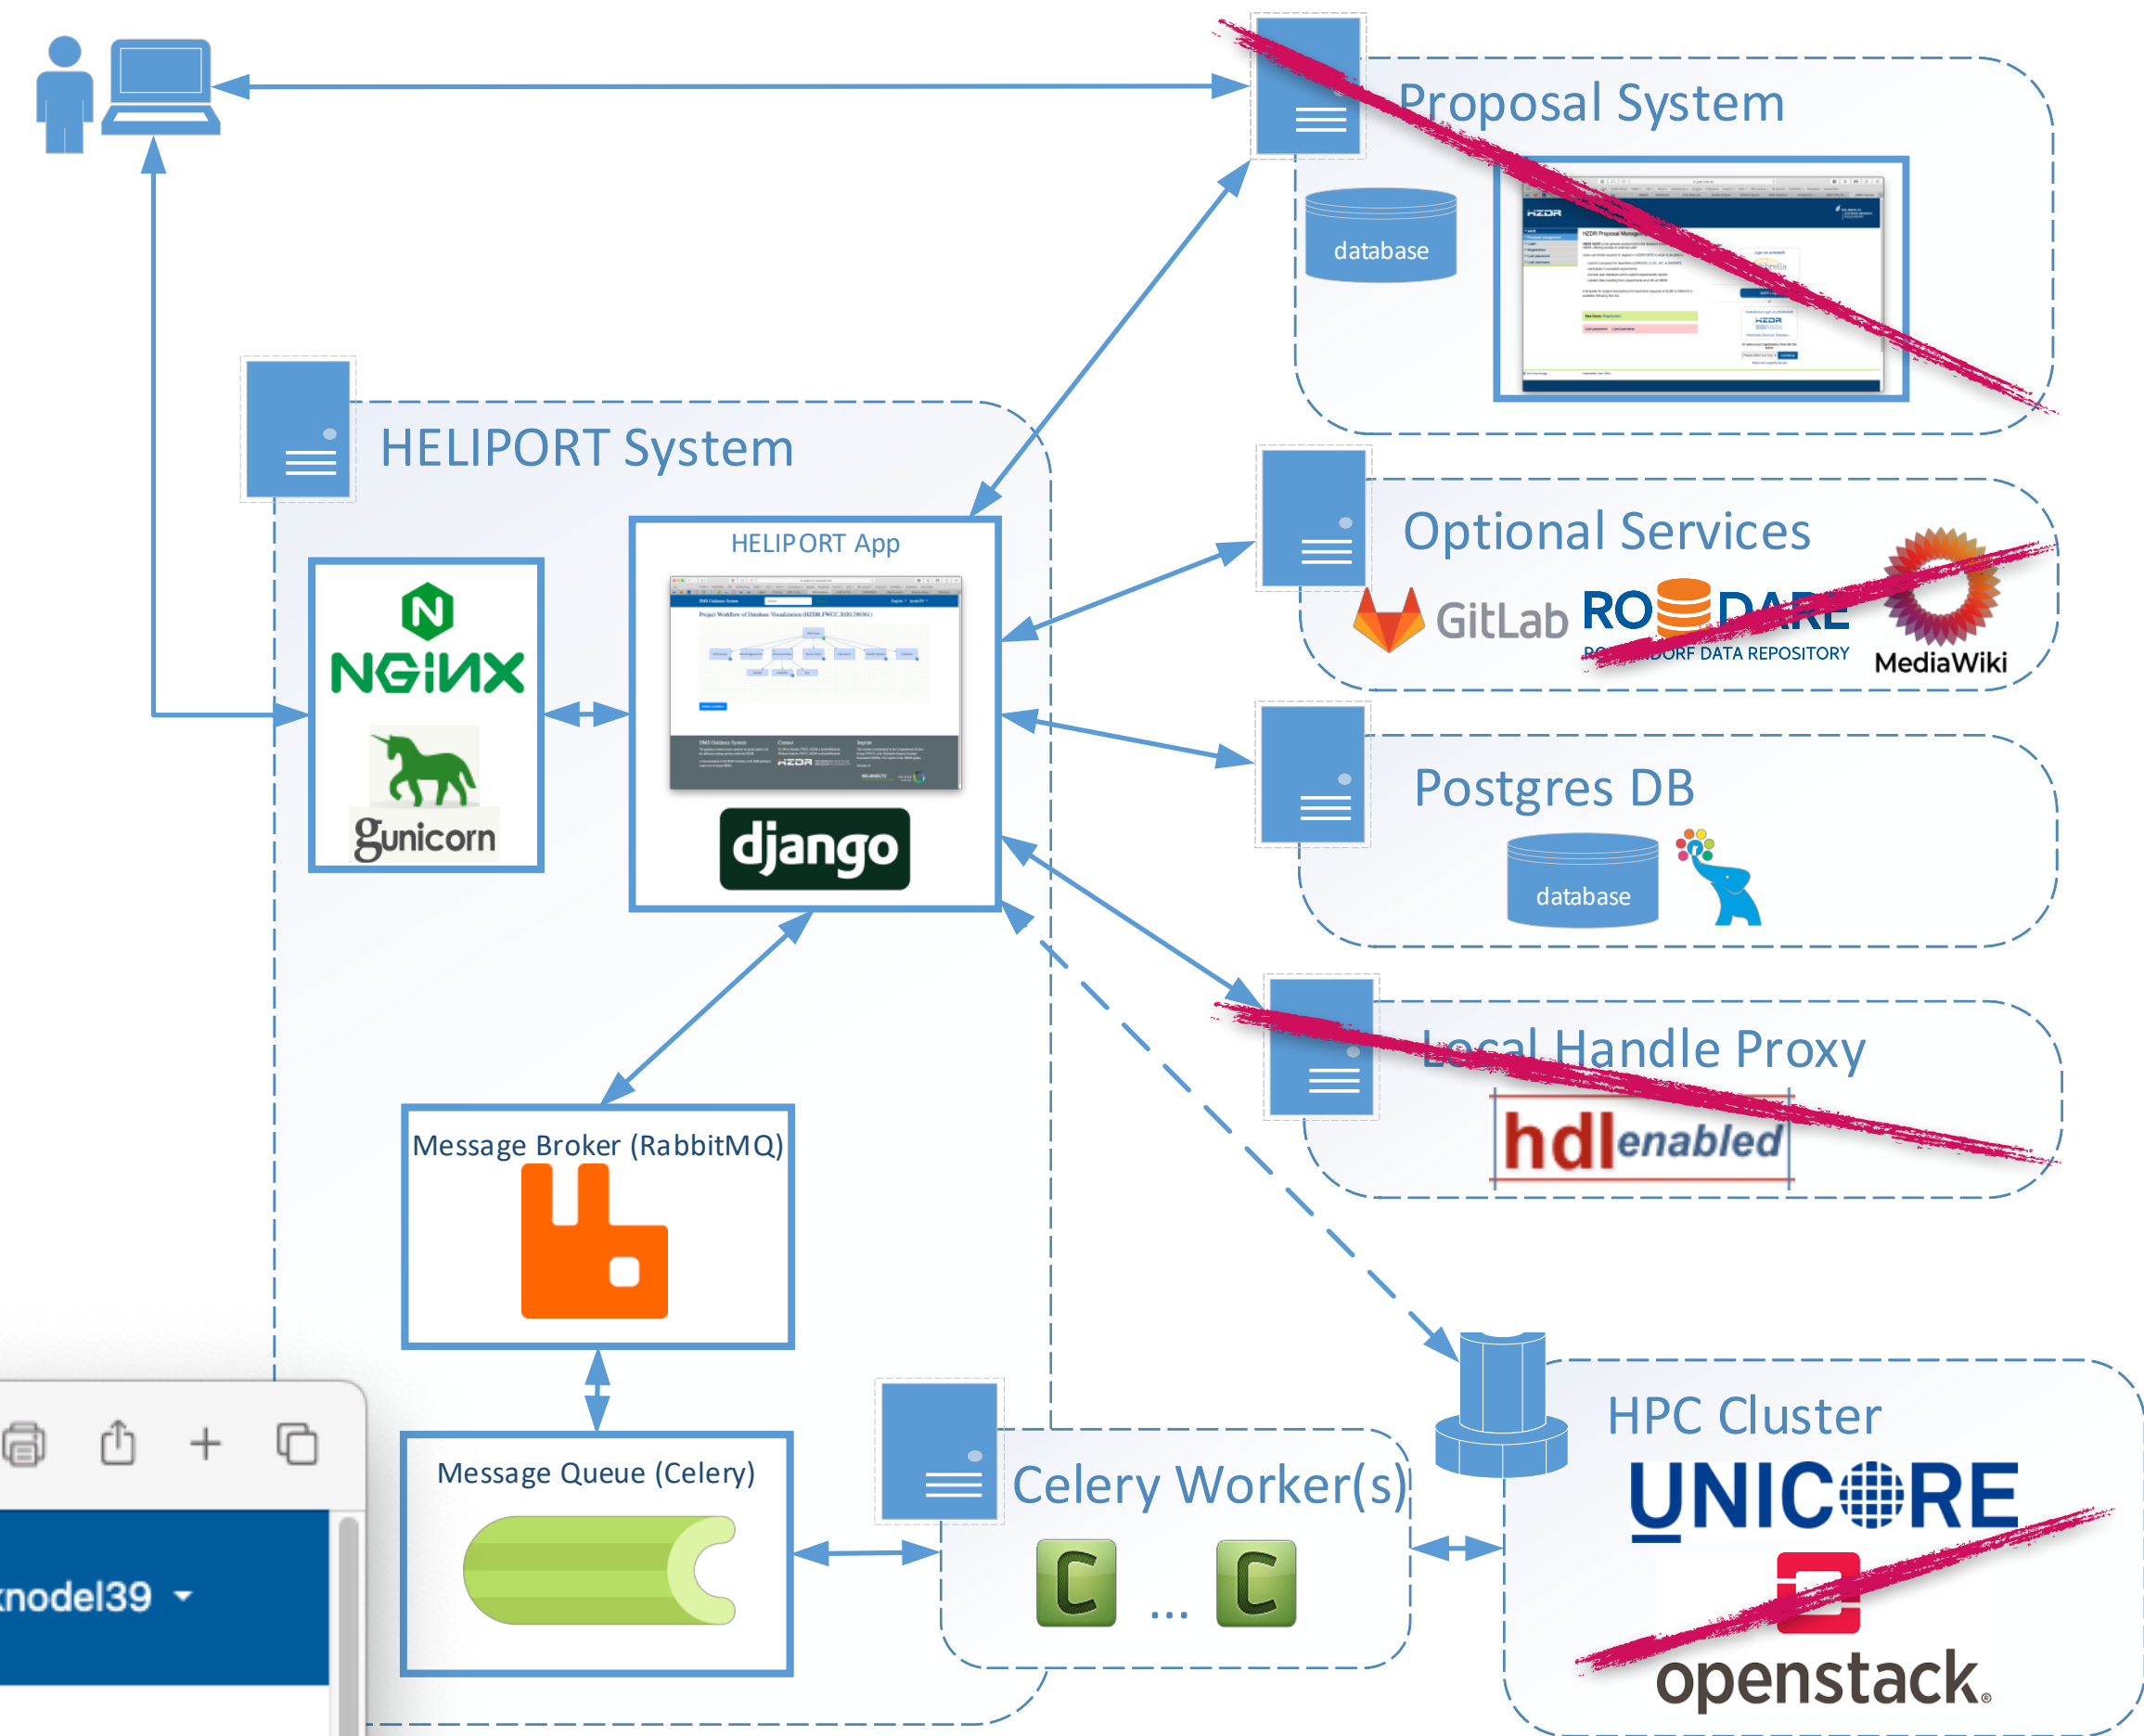

HELIPORT and the Infrastructure at Helmholtz Institute Jena

- HELIPORT was initially developed to provide access to the computing Infrastructure at the HZDR.
- The infrastructure at Jena is different, but the important systems are available:
 - HPC Infrastructure and Data Management*
 - Data Acquisition
 - Git Repositories
- And others are in development:
 - Lab Documentation
 - Data Repository

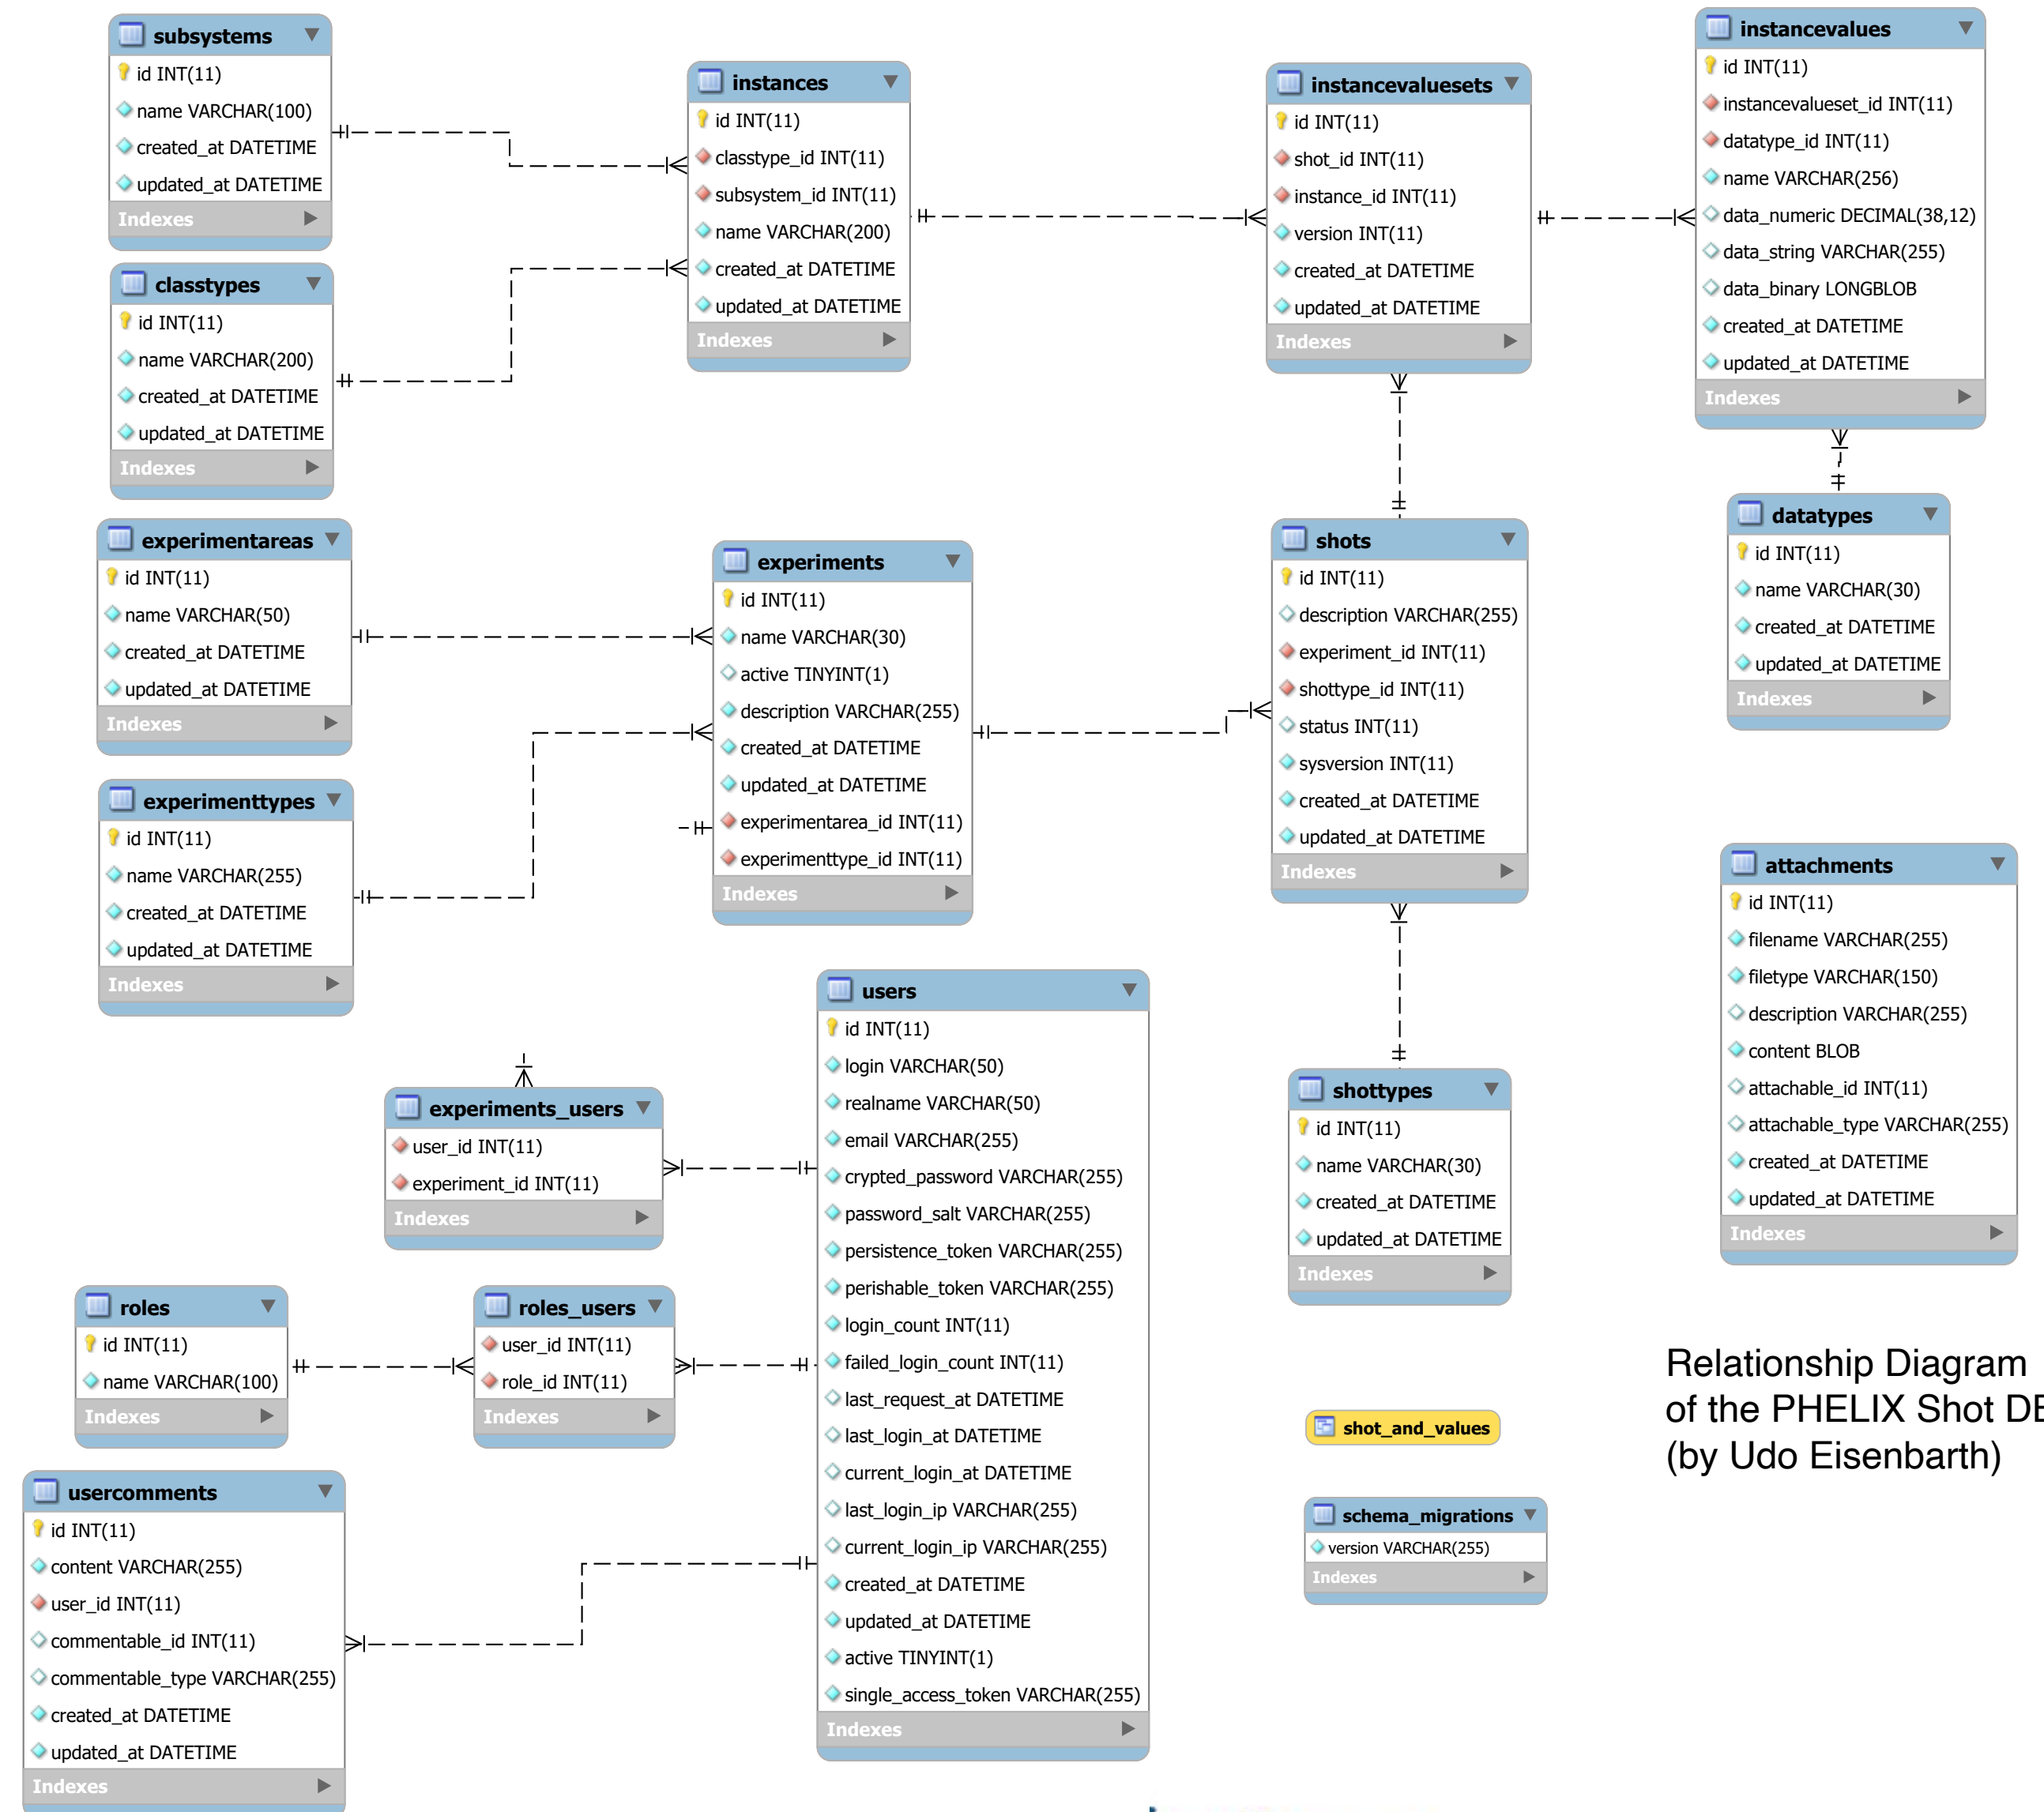

HELIPORT System Infrastructure for POLARIS

- HELIPORT is a future service on a HIJ server.
- Other services or systems are configurable.
- The HELIPORT Web-App itself is based on Django:
 - HELIPORT communicates with various system through REST APIs,
 - The metadata is stored in a PostgreSQL database.
 - The HELIPORT graph and integrated systems are configurable.
- The CWL workflows are managed in HELIPORT and can be executed on various machines using SSH:

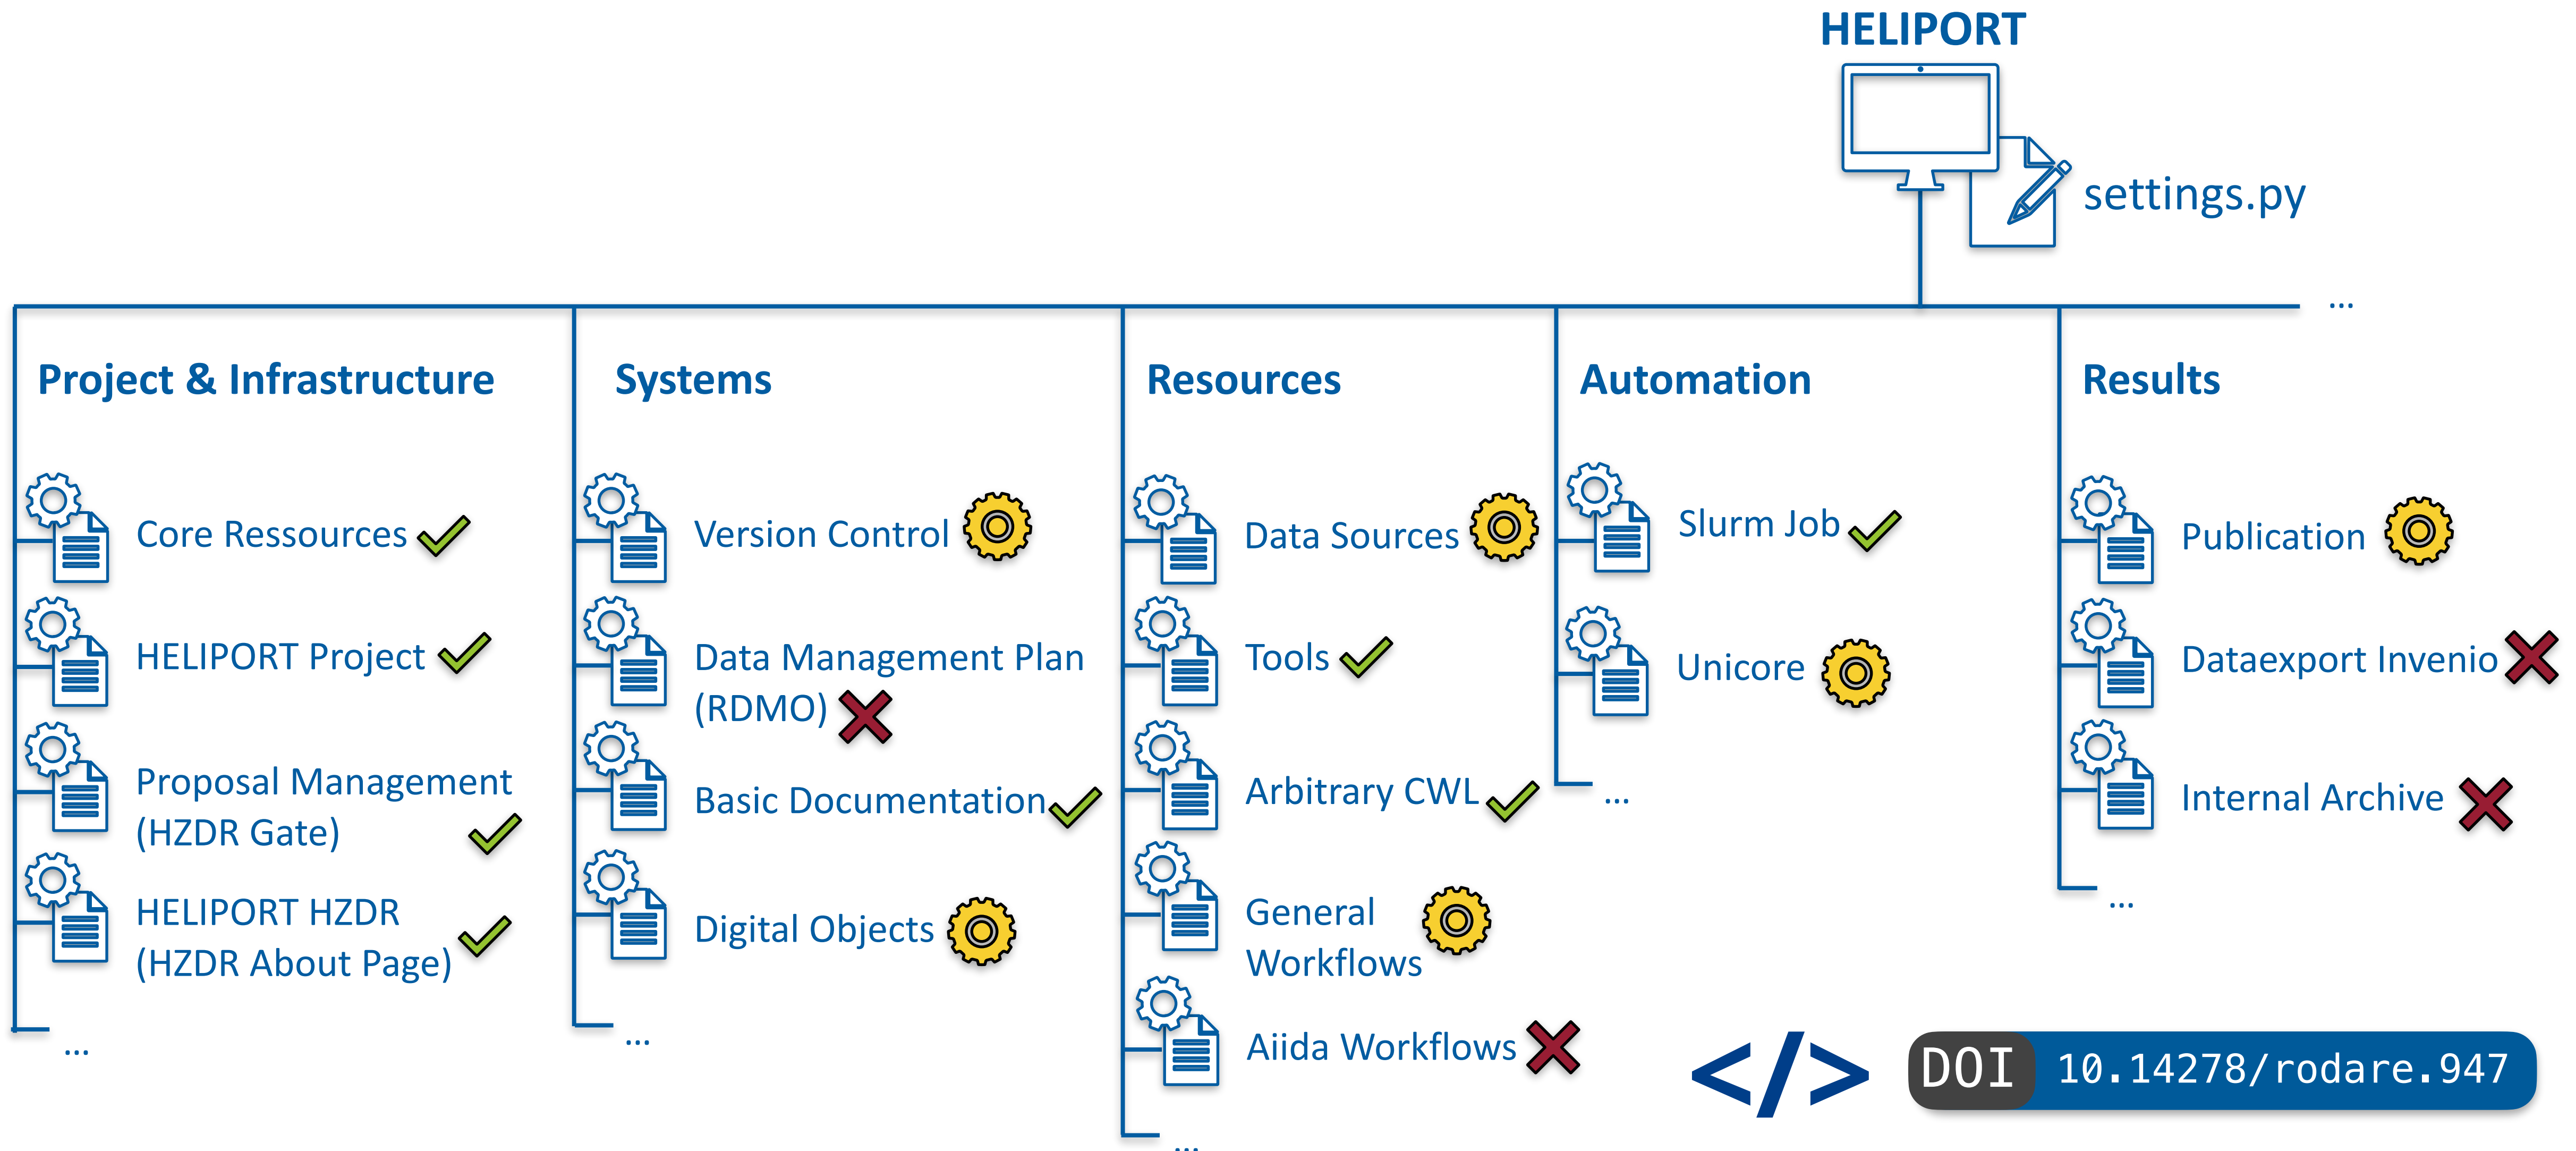

POLARIS Experiment Database

- The Metadata of the POLARIS experiment is managed by a modified version of the **PHELIX Shot DB**.
- Top-level project metadata is available within HELIPOINT.
- Additionally a separate (POLARIS) **Laser Metadata Plugin** in HELIPOINT is required:
 - (Meta)Data can be exchange with various system through REST APIs,
 - The experiment specific metadata will be exchanged with the PHELIX Shot DB and referenced in HELIPOINT.
- The **Laser Metadata Plugin** provides a view in HELIPOINT to configure laser specific metadata.

Relationship Diagram of the PHELIX Shot DB (by Udo Eisenbarth)

Modular HELIPORT Design (Django Apps)

Integration of a Custom Plugin

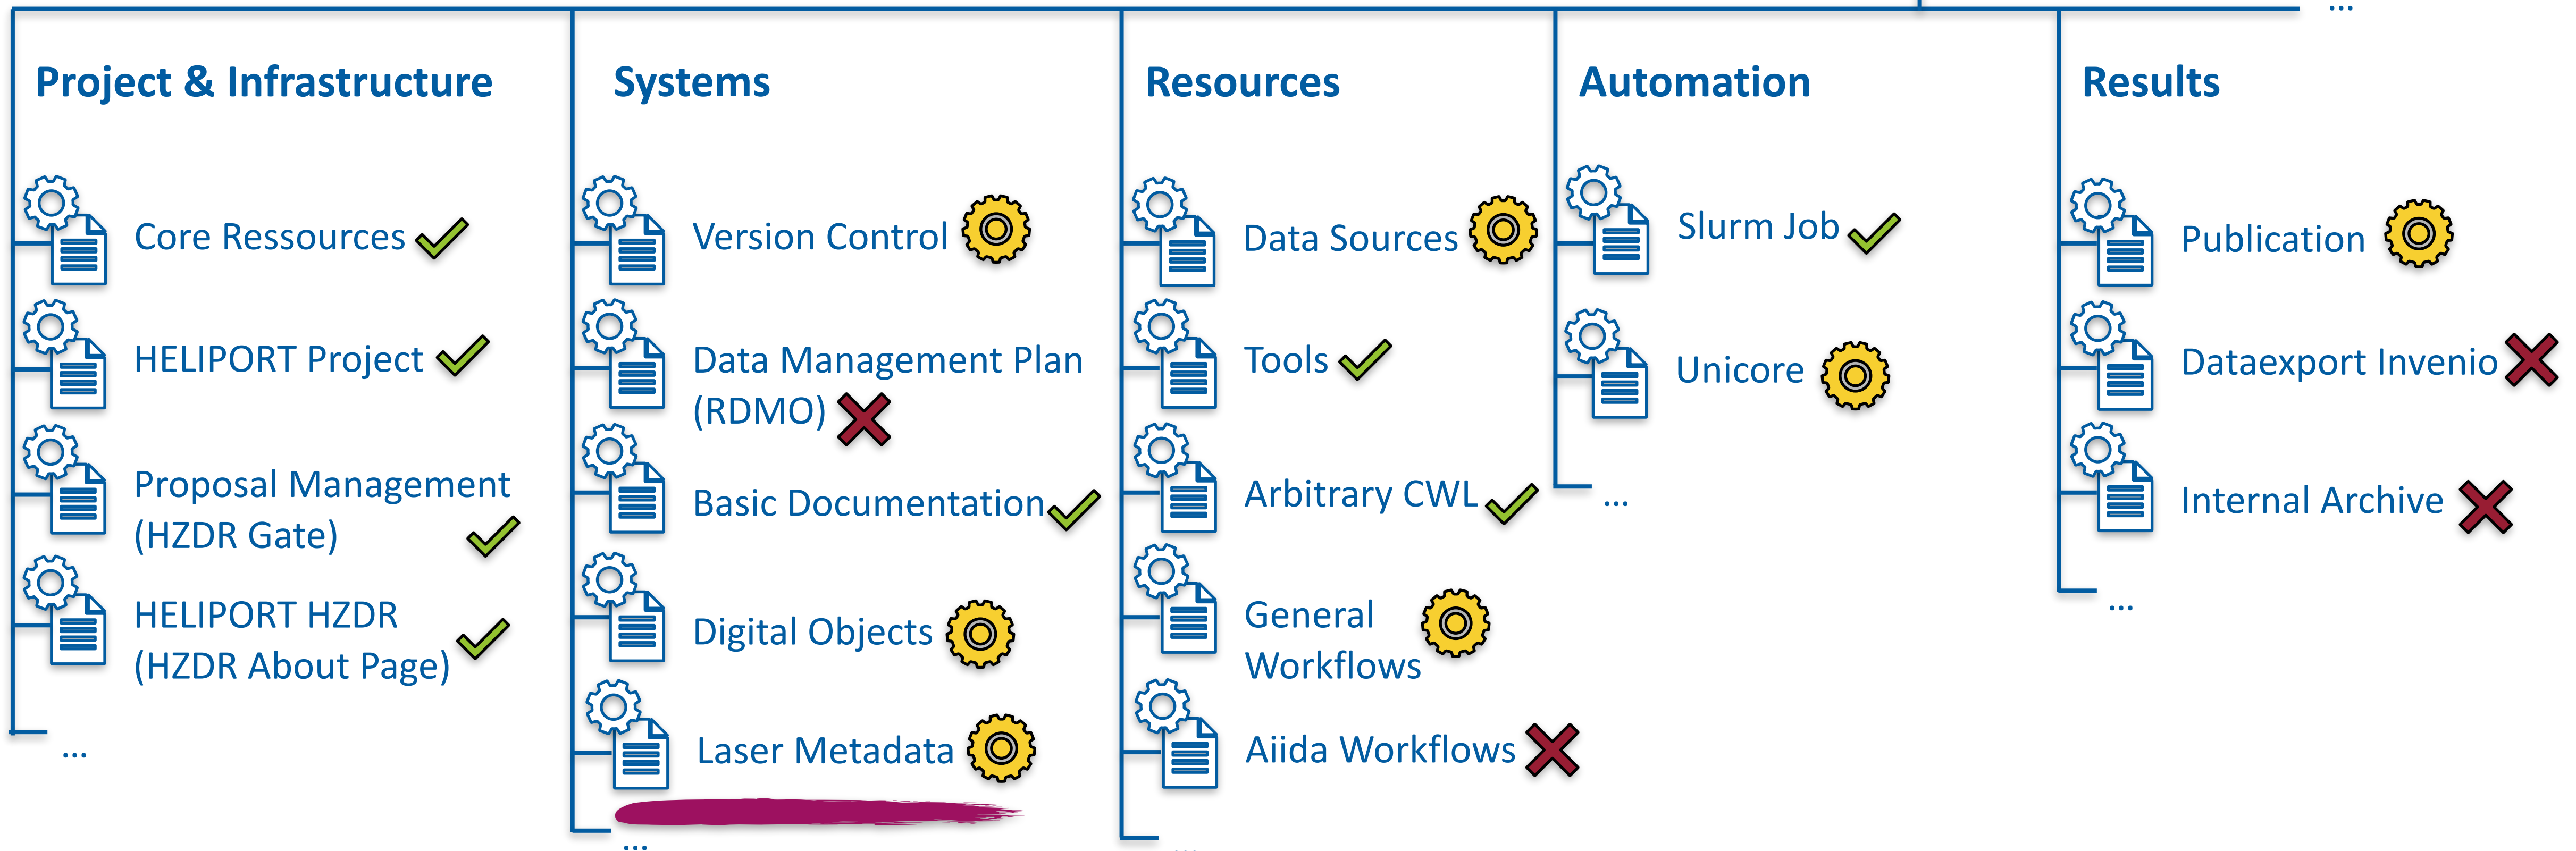

```

GRAPH = {
  'Project': ['project_configuration', 'gate_connection'],
  'Systems': ['version_control', 'data_management_plan', 'documentation',
             'digital_objects', 'sharelatex', 'lasermeta'],
  ...
}
    
```

HELIPORT

settings.py

POLARIS Metadata — Laser Metadata Plugin

- The idea is to collect the experiment specific metadata with a flexible **Laser Metadata Plugin**
- The data columns are can be configured flexible using the HELIPORT website:
 - An extendable vocabulary for specific field can be extended during the experiment
 - Rows can be added using web interface or REST API.
 - Fields can be configured with pre-filled (but editable) content.
- The resulting schema can be used in other future projects and also published in a data repository using a workflow in Heliport.

The screenshot shows the HELIPOINT web interface. The header includes the HELIPOINT logo, the text 'HELMholtz Scientific Project WORKflow Platform', a search bar, and a language selector set to 'English'. The main content area is titled 'Project Properties' and displays the following information:

HZDR-ID	HZDR.FWCC.2021.95018
Handle	20.500.12865/HZDR.FWCC.2021.95018
Digital Object ID	73
uuid	8fab8a14-0f2f-414d-bbe0-747c38129bc4
serialization url	https://vlsdms.fz-rossendorf.de/project/9/serialize/
Owner	Voigt, Martin (FWCC) - 141575
Created	May 18, 2021, 1:03 p.m.
Group	FWCC
Title	An Example Project
Description	This Project has the sole purpose of demonstrating the serialization functionality of HELIPOINT using vocabularies like datacite, rdfs or custom terms.

Below the description is an 'Edit' button. The 'Members' section lists:

Name
Knodel, Dr. Oliver (FWCC) - 132739

Conclusions

- HELIPOINT provides a comprehensible top-level view on the project and all corresponding systems
- With plugins additional services or systems can be integrated
- The metadata can be used in integrated workflows to enable high interoperability
- With our **Laser Metadata Plugin** we can collect and customize metadata and publish it in a data repository like Rodare.
